

FAST FACTS

EA2185 - Comparing the Clinical Impact of Pancreatic Cyst Surveillance Programs

Eligibility Criteria

1. Patient must be ≥ 50 years and ≤ 75 years of age
2. Patient must not have acute pancreatitis or a history of chronic pancreatitis
3. Patient must have received a CT, MRI, or EUS within 6 months prior to randomization that revealed one or more ≥ 1 cm pancreatic cyst (s).
4. Patients of childbearing potential must not be known to be pregnant.
5. Patient must not have a prior diagnosis of pancreatic malignancy of any type.
6. Patient must not have a history of pancreatic resection.
7. Patients with only pancreatic lesions without malignant risk (pancreatic pseudocyst or classic serous cystic lesion) are not eligible
8. Patient must not have a family history of pancreatic adenocarcinoma in one or more first-degree relatives (biological parents, full siblings or children).
9. Patient must not have pancreatic cyst morphology that would prompt immediate surgical consideration (enhancing mural nodule, solid component in cyst, pancreatic duct ≥ 10 mm, cyst causing obstructive jaundice).
10. Patient must not have a comorbid illness that precludes pancreatic cyst resection
11. Patient must not be participating in any form of pancreatic cyst surveillance.
